Braz Dent J 19(2) 2008 Diagnosis of proximal caries 99 unhealthy (spotted or cavited) in the clinical examination, R1 R5 versus R0 in the radiographic examination

radiographic caries diagnosis SlideShare

0 Proximal caries susceptible zone caries Approximately 40 50 % demineralization is required for radiographic detection of a lesion. As seen in the occlusal view, above right, the thickness of the tooth buccolingually masks the carious lesion when it is small. The actual depth of penetration of a carious lesion is actually deeper than it appears on the radiograph.
